

Mission Statement

We will build the fond memories of tomorrow's generation by creating communities offering a more relaxed approach to life, reflecting an organic connection to the climate, community, and the environment.

We will provide designs which naturally lead people back to basics, allowing them to return to a more sociable and congenial way of life.

We will continue to provide leadership and an environment which automatically leads to production of quality Communities and homes, allowing people to enjoy their lives with minimal maintenance, coupled with cost savings from efficient design and energy saving concepts.

We will provide universal access in our designs while incorporating architectural concepts which insure access does not overshadow design, instead allowing it to blend seamlessly into the home.

We will lead the way to smart utilization of eco building concepts so that homes appear to grow from the earth, sitting naturally upon the site with minimal disturbance to the environment which surrounds all of us.

We will incorporate Green Building into every home designed resulting in cost savings to the homeowner while protecting our environment and leaving it for the next generation so that they can in turn....

..... Build their children's memories.
